[TSMC2003-0327]****Listing of Claims:**

This listing of claims replaces all previously listings of claims.

1. (Currently amended) A method of etching a nitride-based bottom etch stop layer in a copper damascene structure comprising:

etching the nitride-based bottom etch stop layer using a high density, high radical concentration plasma containing fluorine radicals and oxygen radicals, wherein radical-to-ion ratio of the fluorine radicals and the oxygen radicals in the plasma is greater than about 10:1.
2. (Canceled)
3. (Original) A method according to claim 1, wherein the nitride-based bottom etch stop layer is silicon nitride.
4. (Withdrawn) A method according to claim 1, wherein the nitride-based bottom etch stop layer is oxynitride.
5. (Original) A method according to claim 1, wherein the fluorine is provided by at least one of CF₄, CHF₃, SF₆, NF₃, C₂F₆, C₄F₈, CH₂F₂, CH₃F, and C₄F₆.
6. (Original) A method according to claim 1, wherein the high density plasma further comprises N₂ and any one of inert gases.

PATENT**ATTORNEY DOCKET NO.: N1085-00188
[TSMC2003-0327]**

7. (Withdrawn) A method according to claim 1, wherein the copper damascene structure is a via step.

8. (Withdrawn) A method according to claim 1, wherein the copper damascene structure is a single damascene structure.

9. (Original) A method according to claim 1, wherein the copper damascene structure is a non-intermediate etch stop layer dual damascene.
